

- 
- This map illustrates the distribution of various genetic ancestry components across Europe. The landmasses are shown in light gray, with white outlines for coastlines and national borders. Data points are represented by colored symbols: red circles for EHG & CHG, green squares for WHG, purple diamonds for Early farmers, orange triangles for Neolithic farmers, gray inverted triangles for Steppe pastoralists, yellow circles for Bronze age, and light blue squares for Iron age to early modern. The symbols are densely clustered in Western and Central Europe, particularly in the British Isles, Scandinavia, and Central Europe, and more sparsely distributed in Eastern Europe and North Africa.
